

SMART:myDrive Mobile Handheld BP50

New Mobile Ticketing Terminal is fast, durable, and dependable

SMART:myDrive Mobile Handheld BP50 is a model designed for handheld ticketing and validation. It ensures quick ticket sales and easy validation – even in harsh conditions.

- **Robust:** The BP50 is built to last, and will continue operating in conditions where consumer tablets would not survive.
- **Fast:** A new dual-core processor speeds up transactions.
- **Longevity:** The batteries are long lasting and can easily be replaced, which ensures that ticket operators can continue to do their job.

Built to last

The BP50 thrives in environments where consumer tablets would not survive. TankSmith technology provides IP65 dust and water sealing, and ensures that the device will be intact after a fall from up to 1.80 meters. The Eyeluminat display is readable under direct sunlight and from all angles. Corning Gorilla Glass protects the display. These features mean that operators can be confident the BP50 will always be at their side, ready to work in all conditions. But ruggedness is not the only benefit the BP50 provides.

Responsive, fast and long lasting

The BP50 is both easier to handle and more responsive than FARA's previous ticketing device. Within a light and small body it has a faster processor and more responsive screen. The long battery life makes these advantages available for a whole shift. One day there will be a device that does all of this even better and FARA's applications are prepared for that too.

Made for the future

Adapting FARA's applications for Android not only allowed FARA to use the BP50, but when it is time to upgrade to newer devices, FARA can choose a device from the diverse Android market and ticket operators will lose no time adapting to a new user interface
